Polygon 1 near plot 013 01

canopy FD

c bh 48" dbh = 332m

age

42y

FD

h -

c bh 41" dbh = 332m

age

42

also Dr ~ same size & reaching
canopy - w/ 20° age ?

E part of polygon 1

mixed over story FD, CW, HW

w/ dense pole sapling below
w 50/50 slope 20-25%

logging not obvious

soil red brown, SL but w/
high coarse fragm say >70%

2

might approach DS no misgrowth
except bit of Gaultieri - in open
spars

At edge of polygon 2 Traveling
E. mix of wet, mid size & pale
no under growth - dying trees?

To lower plot polygon 2

from mix of ages could call
desert var stage 7

Polygon 2 E edge agenree

Fd h -

cbh 80" - dbh = 167 m

age 158+ from 14" core

Polygon 3 mod area of
good stage 7 on bit of bench
about middle of polygon

②

lower edge of polygon 5
poor, thin stage 5

Nov 27/99

- from W end of polygon 2 E
- (W and marginal 7 but fades to) depauperate 6 E w/ patches of 4
- at narrow E and above road
very small patches of poor 7
but mostly about 5 w/ patches of 4
- below road 6 w/ occ nets

E end of polygon 4 marginal 5

- just west of road ~6 made of nets
middle age trees & some pole thickets
- poor 6 to 5

side tip up & across plan 7
to edge of g confirm Gas st 5

lower proportion 7 in poly 7

to 2 up st 6 to 5

drop K except ~~on 5~~ - completely
pan

mid polygon 4 remains
poor st 8 with - 10/20 5

ravine area all st 7

to W 7 mixed of mostly 6

keep at 30%
~~reduce st 7 to ~20%~~

raise st 6 to 20

steeper gentle over all of 7
pan + some of 6
